

WORKSHOPS

CYBERSECURITY

IN YOUR COMPANY

Many organizations have been faced with a huge challenge at the time of COVID-19.

The focus on the remote work model required the implementation of appropriate tools, and above all, provision of high-level security.

Cloud solutions are more at risk than ever.

However, we can help you!

We invite you to free workshops.

During these workshops we will check the condition of your security measures and show you how to increase the level of security.

Free workshops with our experts will help you build an effective security strategy!

- ✓ We will identify the current threats in your IT environment
- ✓ We will set the goals of your corporate security strategy
- ✓ We will test selected scenarios with free trial licenses
- ✓ We will present the latest security measures
- ✓ We will plan steps based on the specialist's recommendations

Why you should join?

- You will identify the current threats in your cloud environment
- You will receive recommendations from experienced ISCG engineers on the further development of cybersecurity
- You will document your security strategy
- You will learn about the current cybersecurity trends and the latest tools available on the market

Why ISCG?

We are a team of highly qualified specialists with high competences and extensive experience. We use our knowledge and creativity to create innovative and effective solutions that address the needs of your business so that it remains **secure and competitive**.

With the extraordinary efficiency of our team, **personalized solutions**, efficient project management, attention to information security and product quality, as well as the use of the best solutions from renowned developers, we can meet all the challenges and achieve measurable business results.

WORKSHOPS

CYBERSECURITY

IN YOUR COMPANY

During the workshops, we will help you develop your cybersecurity awareness. Together, we will see what types of threats your company is exposed to and we will show you how to classify and counteract these threats.

Topics:

- Analysis of the vulnerability and threats of cyber attacks found in the company's IT environment.
- Recommendations for minimization of the identified risks.
- Detailed assessment of IT and security priorities and initiatives - directly from ISCG specialists.
- Demonstration of the newest integrated security tools.
- Recommendation of further actions and steps for the development of security infrastructure.

Agenda:

- Goals and scenarios of the workshops - 2h.
- Necessary test licenses and policy configuration - 4h.
- Collection of data from the cloud environment - minimum 2 weeks.
- Preparation of a report on the current security status - 2 days.
- Summary of the workshops :
 - Overview of the latest security tools and their functions - 2 h
 - Discussion and analysis of the results of the security review - 1 h
 - Recommendations for further actions - 1h
